Readme file for "Heroes and Villains: The Effects of Heroism on Autocratic Values and Nazi Collaboration in France" by Julia Cagé, Anna Dagorret, Pauline Grosjean and Saumitra Jha. *American Economic Review,* Vol. 113, No. 6, July 2023.

Overview

The replication folder contains several data files and do files, which can be used to i) generate all the datasets used in the analysis from the raw data and ii) replicate all results from the tables and figures in the paper and the appendix using Stata. The replicator should expect the code to run for about 2 hours and a half (with the corresponding computer specifications p. 12).

Data Availability and Provenance Statements

NB: Under the IRB approval for this project (approval # HC190869, UNSW), "all the unit records data will only be used at an aggregated level and fully anonymised". We thus can only make available the collaborators dataset aggregated at municipal level.

Data sources

Results of the first round of the 1914 legislative elections
The paper uses data on 1914 legislative elections in France. The authors collected the data and have made it available. The data can be found in the French National Archives.
Data reference: Archives Nationales (France). 1914. "Résultats des élections." C//7241 to C//7254. Unpublished data. Accessed October 19, 2021.
Datafile: Original_source_data/Elections/source_election_files/legislative_elections_1914.dta

Results of the first round of the 1919 legislative elections
The paper uses data on 1919 legislative elections in France. The authors collected the data and have made it available. The data can be found in the French National Archives.
Data reference: Archives Nationales (France). 1919. "Résultats des élections." C//10001 to C//10009. Unpublished data. Accessed October 19, 2021.
Datafile: Original_source_data/Elections/source_election_files/legislative_elections_1919.dta

Results of the first round of the 1924 legislative elections
The paper uses data on 1924 legislative elections in France. The authors collected the data and have made it available. The data can be found in the French National Archives.
Data reference: Archives Nationales (France). 1924. "Résultats des élections." C//10010 to C//10019. Unpublished data. Accessed October 19, 2021.
Datafile: Original_source_data/Elections/source_election_files/legislative_elections_1924.dta

Results of the first round of the 1932 legislative elections
The paper uses data on 1924 legislative elections in France. The authors collected the data and have made it available. The data can be found in the French National Archives.

Data reference: Archives Nationales (France). 1932. "Résultats des élections." C//10031 to C//10042. Unpublished data. Accessed October 19, 2021.
Datafile: Original_source_data/Elections/source_election_files/legislative_elections_1932.dta

Results of the first round of the 1936 legislative elections
The paper uses data on 1936 legislative elections in France. The authors collected the data and have made it available. The data can be found in the French National Archives.
Data reference: Archives Nationales (France). 1936. "Résultats des élections." C//10043 to C//10057. Unpublished data. Accessed October 19, 2021.

List of individual collaborators Paillole
This list was compiled by the French counterintelligence agency in 1945, under the direction of Lieutenant Colonel Paillole. Per UNSW Ethics Agreement the individual-level data is not provided. Aggregated data at the municipality level is provided. The data was accessed through Dominique Lormier (d.lormier@wanadoo.fr), a French historian who is a member of the Centre National Jean Moulin.
Data reference: Centre Jean Moulin. 1945. "Liste des "suspects et douteux" du 5e bureau de l'état-major de l'armée." Unpublished data. Accessed February 21, 2018.
Aggregated datafile: Original_data/Collaboration/collabosPaillole.dta

List of individual collaborators from LVF
This data lists members of the LVF. Per UNSW Ethics Agreement the individual-level data is not provided. Aggregated data at the municipality level is provided. The data was accessed through Philippe Douroux (contact@allary-editions.fr).
Data reference: Service Historique de la Défense de Caen. "Fichier des morts de la LVF." Unpublished data. Accessed March 5, 2021.
Archives Nationales (France). "Fichiers de référence du Comptoir National d'Escompte (CNE)." AN 19890151/7/1 15227. Unpublished data. Accessed March 5, 2021.
Aggregated datafile: Original_data/Collaboration/collabos_wOSSDouroux_extract.dta

List of top personnel of the Vichy government
This data lists the top personnel of the Vichy government (cabinet members and top Ministry personnel), diplomatic service, press, radio and political parties (members of executive committees). Per UNSW Ethics Agreement the individual-level data is not provided. Aggregated data at the municipality level is provided.
Data reference: Office of Strategic Services, A Selected Who's Who in Vichy, France, June 1940-August 1944, United States, 1944.
Aggregated datafile: Original_data/Collaboration/collabos_wOSSDouroux_extract.dta

Dictionnaire des communes
This data lists the 'bureau de recrutement' of each municipality in France in 1915. The authors collected the data and have made it available.
Data reference: Lassalle, Charles. 1915. Dictionnaire des communes, administratif et militaire, France, Algérie, Tunisie: dressé en tableaux donnant pour chaque commune le rattachement au canton, à l'arrondissement, au département, à l'organisation militaire, (9e édition).
Datafile: Original_source_data/Dictionnaire/raw_dictionnairedescommunes.xlsx

Assignment of infantry regiment to military recruitment qreas
This data maps military recruitment bureaus ('bureaux de recrutement') to infantry regiments. The authors collected the data and have made it available.
Data reference: Lassalle, Charles. 1915. Dictionnaire des communes, administratif et militaire, France, Algérie, Tunisie: dressé en tableaux donnant pour chaque commune le rattachement au canton, à l'arrondissement, au département, à l'organisation militaire, (9e édition).
Datafile: Original_source_data/Dictionnaire/id_name_bureauxderecrutement_regiment.xlsx

Lists of combats and bombardments experienced by each infantry regiment during the Battle of Verdun
This data provides information on the combat experience and bombing intensity encountered by infantry regiments during the Battle of Verdun. The authors collected the data and have made it available.
Data reference: Ministère des armées. "Historiques régimentaires des unités engagées dans la Première Guerre mondiale." https://www.memoiredeshommes.sga.defense.gouv.fr/fr/article.php?larub=51&titre=historiques-regimentaires (accessed March 22, 2022).
Datafile: Original_source_data/Regiments/Combats/LocationAllRegiments.xlsx

List of mention of 'Pétain' in Historiques des Régiments
This data provides information on references of the Marshal Pétain in the historical regiment records of WWI. The authors collected the data and have made it available.
Data reference: Ministère des armées. "Historiques régimentaires des unités engagées dans la Première Guerre mondiale." https://www.memoiredeshommes.sga.defense.gouv.fr/fr/article.php?larub=51&titre=historiques-regimentaires (accessed March 22, 2022).
Datafile: Original_source_data/Regiments/Historiques_MentionsPetain/MentionsPETAIN.xlsx

Regiments' exposure to WWI battles and to Pétain at Verdun
This data provides information on regiments' exposure to WWI battles and to Marshal Pétain at Verdun. The authors collected the data and have made it available.
Data reference: Ministère des armées. "Historiques régimentaires des unités engagées dans la Première Guerre mondiale." https://www.memoiredeshommes.sga.defense.gouv.fr/fr/article.php?larub=51&titre=historiques-regimentaires (accessed March 22, 2022).
Datafile: Original_source_data/Regiments/Verdun/RI_Verdun&OtherBattles.xlsx

List of military units for each regiment during WWI
This data provides the list of military units for each regiment during WWI. The authors collected the data and have made it available.
Data reference: Ministère de la guerre, État major des armées, Service historique. 1923-1924. "Les armées françaises dans la Grande guerre, Tome X. 10.1 & 10.2". https://gallica.bnf.fr/ark:/12148/bpt6k6279687d.texteImage

Computational requirements

We use the following softwares: Stata 17.0, QGIS 3.26.1, TexStudio.

The following Stata packages need to be installed: frmttable, esttab, ftools, reghdfe, psacalc, coefplot, estout, ivreg2, acreg, ranktest.

The replicator should expect the code to run for about 2 hours and a half, with the following computer specifications (or equivalent):
Model Name: MacBook Pro 18,1 (chip: Apple M1 Pro), Total Number of Cores: 10 (8 performance and 2 efficiency), Memory: 32 GB.

Description of programs/ code

To generate the datasets used in the analysis and then replicate all the results in the paper, one needs to define the path to the replication folder on line 9 of the Main_do.do in the root directory of the replication folder and then run Main_do.do.

Main_do.do first calls the do files that transform raw data into the datasets used for the analysis and then calls the do files that replicate the results. Because relative paths were used in the coding, the path names used throughout the do files will not need to be changed.

Below we explain the structure of the replication folder, the data, and sub-tasks executed by the Main_do.do.

i) Generating the datasets used in the analysis from the raw data (lines 31 to 76 of **Main_do.do**):

The files necessary to generate the datasets used in the analysis from the raw data are contained in the **Original_source_data** folder. This folder contains the raw data for

- the legislative election results (**Elections** sub-folder);
- the assignment of the communes to their military recruitment area and military regions in 1915 (**Dictionnaire** sub-folder);
- the history of the regiments (**Regiments** sub-folder);
- the socio-demographic characteristics of the communes (**Census** sub-folder);
- the presence of natural resources (**NaturalRessources** sub-folder);
- the precipitations and temperature (**Weather** sub-folder);
- the distance between municipalities' centroids and military recruitment area (**Miscellaneous** sub-folder); and
- the shapefiles (**Shapefiles** sub-folder),

and the do files and additional data sources necessary to transform these raw data into the formats found in the Original_data subfolder of the Data folder (as described below, this folder contains the datasets used in the analysis). All the raw data are described inside the subfolders of **Original_source_data** folder.

The **Original_source_data** folder has 10 subfolders:

- **1/ Elections**

This folder contains the following information:

- generating_electoral_results_from_source.do: Do file that generates the following 6 datafiles:

    - all_elections_1914_metropole_reshape_ccomune_idgeofla.dta
    - all_elections_1919_metropole_reshape_ccomune_idgeofla.dta
    - all_elections_1924_metropole_reshape_ccomune_idgeofla.dta
    - all_elections_1932_metropole_reshape_ccomune_idgeofla.dta
    - all_elections_1936_metropole_reshape_ccomune_idgeofla.dta
    - all_elections_1936_metropole_reshape_ccomune_idgeofla_2ndRound.dta

in the Original_data subfolder **Elections** in the Data folder from raw data contained in the source_election_files subfolder.

- source_election_files subfolder, which includes:
    - legislative_elections_1914.dta
    - legislative_elections_1919.dta
    - legislative_elections_1924.dta
    - legislative_elections_1932.dta
    - legislative_elections_1936_1stround.dta
    - legislative_elections_1936_2nd.round.dta

This is raw Electoral data, the original electoral data collected by the authors and described in the file Description_of_elections_source_files.docx.

- Description_of_elections_source_files.docx: description of sources of all raw data in the folder and codebooks for all the data files necessary to generate the files contained in the Elections subfolder of the Original_data subfolder.

- **2/ Collaboration**
    - *NB: Under the Ethics approval for this project received by UNSW (approval # HC190869), "all the unit records data will only be used at an aggregated level and fully anonymised". We make available data aggregated at municipal level, but not individual level data.*

This folder contains the following information:

- collaboration_Dofiles subfolder: subfolder than contain 6 do files that clean and assemble the collaborators datafiles and that are described in the README text file also included in the folder. To comply with IRB requirement, we cannot provide the raw datafiles, but all the dofiles in this folder enable researchers to generate the following 3 datafiles:
    - collabosPaillole.dta: Collaborators from the Paillole dataset

- collabos_wOSSDouroux_extract.dta: Collaborators from the Legion of French Volunteers data and collaborators from the OSS data.
- analysis_dataset_moversTableA16.dta: Dataset build from the Paillole list with collaborators who were movers (numbers and shares). Used for Table A16.

found in in the Original_data subfolder **Collaboration**.

In addition, the folder includes:

- InseeFile subfolder, which provides data used to code the gender based on first names.
- OSS subfolder, which provides information on the dataset on collaborators with top leadership positions across the Vichy regime complied by the US Office of Strategic Services (OSS) in 1944. This subfolder contains the dofile used to clean the raw data (raw individual-level data we cannot make available because of IRB requirements).
- Paillole subfolder, which contains information on the dataset containing the list of French collaborators that was compiled by the French counterintelligence agency under the direction of Lieutenant Colonel Paillole in 1944-45 and the code used to code municipalities of origin/residence of collaborators.
- Philippe Douroux subfolder, which contains information on the additional source on collaboration collected by the journalist Philippe Douroux from different data sources described in the README text file included in the folder. This subfolder contains the dofile used to clean the raw data (raw individual-level data we cannot make available because of IRB requirements).

- **3/ Dictionnaire**

This folder contains the following information:

- raw_dictionnairedescommunes.xlsx: the raw “dictionnaire des communes" information digitized from the 9th edition of the *Dictionnaire des communes*.
- CodebookDataDictionnairedesCommunes.docx: a text file that describes the variables included in these raw data.
- id_name_bureauxderecrutement_regiment.xlsx: an excel file that contains information on the matching between military recruitment bureau and the infantry regiments.
- README.docx: a text file that provides detailed information on the “dictionnaire des communes” data source, as well as on the assignment of infantry regiments to military recruitment areas.
- do_dictionnairedescommunes.do: a do file that assigns each of the commune to its “bureau de recrutement” by using the “Dictionnaire des communes” data.

- **4/ Regiments**

This folder contains the following information:

- CleanRegiments.do: a do file that uses information on the regiments' history to generate data on the regiments' total number of deaths during the different WWI battles.
- Combats subfolder, which includes information of the lists of combats and bombardments experienced by each infantry regiment during the Battle of Verdun.
- Historiques_MentionsPetain subfolder, which contains information on the number and context of specific references to Pétain and to Nivelle throughout the war.
- OrderBattle subfolder, that provides information of the military units that were exposed to Philippe Pétain before and during WWI.
- TableauHonneur subfolder, which provides information on the list of officers and soldiers who were cited to the order of the army during WWI, appointed or promoted to the Legion of honor, and decorated with military medal.
- Verdun subfolder, that provides regiment-level information on the different battles.

- **6/ Census**

This folder contains the following information:

- !1Census_towns_1931-1954_IGN.do: do file that links the historical population census data for 1931, 1936, 1946, and 1954 at the municipality level to IGN data.
- !2Census_towns_1911-1921_IGN.do: do file that links the historical population census data for 1911 and 1921 at the municipality level to IGN data.
- !3CleanINSEEDecember2019HistPopFile.do: do file that imports and cleans historical population data at the commune level.
- !4MergeHistoPop_IGN.do: do file that merges all the commune-level historical population information with the INSEE identifier.
- Main_CensusDo.do: do file that runs the previously-described four do files.
- temp subfolder, which contains all the temporary datasets generated by the Main_CensusDo.do do file.
- base-pop-historiques-1876-2015_INSEE.xls: commune-level historical population data from INSEE (used in the do file !3CleanINSEEDecember2019HistPopFile.do).
- census_towns_1931_1936-1946-1954.xlsx: commune-level historical population census data for 1931, 1936, 1946, and 1954 (used in the do file !1Census_towns_1931-1954_IGN.do).
- Census1872 sub-folder, which contains data from the 1872 census at the chef-lieu level.

- commune_cantall_IGN.xlsx: excel file that contains information on town coordinates.
- commune_cantall_IGN.dta: dataset in stata format generated in the do file !1Census_towns_1931-1954_IGN.do from the commune_cantall_IGN.xlsx excel file.
- commune_cantall_IGN_clean.dta: dataset in stata format generated in the do file !1Census_towns_1931-1954_IGN.do from the commune_cantall_IGN.dta stata file.
- INSEE_Corhistoriq2016.xlsx: excel file: excel file from INSEE that lists all the boundary and commune name changes.
- recensement_1911_1921.xls: excel file that contains commune-level historical population data (used in the do file !2Census_towns_1911-1921_IGN.do).
- README.docx: text file that provides information and original sources for the historical population censuses.

- **7/ NaturalRessources**

This folder contains the following information:

- do_mining.do: do file that uses data from the "Cadastre Minier Numérique Ouvert" to construct commune-level indicator variables for metals and hydrocarbon.
- data_natural_resources_idgeofla.dta: stata dataset on commune-level metals and hydrocarbon, generated by the previously described do_mining.do do file.
- cadastre_minier.xlsx: excel file that contains the raw data from the « Cadastre Minier » (used in the do file do_mining.do).
- CodebookMetalHydrocarbon.docx: text file that provides the codebook information for the cadastre_minier.xlsx excel file.
- do_RQMS.do: do file that uses data from the French Soil Quality Monitoring Network to construct a measure of soil content.
- XYbiogeography_soil_bacteria_archae_RMQS.xls: excel file that contains data from the French Soil Quality Monitoring Network (RMQS) (used in the do file do_RQMS.do).
- CodebookSoil.docx: text file that provides the codebook information for the XYbiogeography_soil_bacteria_archae_RMQS.xls excel file.
- biogeography_soil_verdun.dta: stata dataset on soil content created by the previously described do file do_RQMS.do.
- README.docx: a text file that provides additional details on the sources of the different datasets.

- **8/ Weather**

This folder contains the following information:

- CodebookPrecipitationTemperature.docx: a text file that provides the codebook for the datasets included in the Precipitation sub-folder as well as for the datasets included in the Temperature subfolder.
- Precipitation subfolder, which contains raw precipitation data.
- Temperature subfolder, which contains raw temperature data.
- do_weather.do: do file that uses data from Meteo France to measure the level of precipitation and temperature for each commune.
- README.docx: text file that provides additional details on the sources of the different datasets included in this folder.

- **9/ Miscellaneous**

This folder contains the following information:

- RDD subfolder, which contains:
    - do_distance_commune_BRD.do: do file that generates the distance of each municipality's centroid to the nearest military recruitment zone in which soldiers were sent at Verdun under Pétain's command or not.
    - GIS_MAP subfolder.
    - README.docx: text file that provides more details on how we computed the distance of each municipality's centroid to the nearest military recruitment zone in which soldiers were sent at Verdun under Pétain's command or not.

- **9/ Shapefiles**

This folder contains the datafiles with information on the French communal administrative delimitation, as well as a README .docx text file that sources and describe these different datasets.

Data on WWI deaths is from Gay and Grosjean (2022). We provide three files in the Original_ data subfolder: "WWIDeaths".

- MdH_municipbirth_clean.dta: individual-level data, as digitized, corrected and provided by Gay and Grosjean (2022) with reference id to full dataset provided by Gay and Grosjean (2022).
- mdh_IGN_cityMdH_new_V&P_municip.dta: the final dataset aggregated at municipal level;

- Deaths_byRI_

ii) Replicating all results in the paper (lines 89-onward of **Main_do.do**):

All the necessary do files for replication are included in the DoFiles folder.

This folder includes two sub-folders:

- The Preparation sub-folder that includes the following 3 do files:
    - !1_PrepareData.do
    - !2_GenerateData.do
    - !3Merge2rounds1936.do

that need to be run to prepare the main datasets for the analysis.

- The Analysis sub-folder, which includes all the do files used to generate all the Figures and Tables included in the paper and appendix, as well as all the descriptive statistics presented in the paper and appendix.

All the Figures and Tables are then generated in the Figures and Tables sub-folders included in the Results folder.

List of tables, figures and in-line numbers

Below are comprehensive tables listing each table, figure and in-line numbers in the paper, along with their program and the corresponding line number.

In-line numbers

Page Paper	In-line number	Program	Line number
2	95967 collaborators.	DescriptiveStatisticsText.do	12
2	88% French line infantry regiments at Verdun in 1916.	DescriptiveStatisticsText.do	20
2	53% France line regiments sent to Verdun under Pétain.	DescriptiveStatisticsText.do	22
3	34947 municipalities.	DescriptiveStatisticsText.do	60
3	7-9% more collaborators in municipalities sent to Verdun under Pétain.	See table results (TableIV.do)	
3	10469 additional active collaborators.	DescriptiveStatisticsText.do	101
3	15404 members of the Resistance hunting Militia.	DescriptiveStatisticsText.do	105
3	5276 members of Gestapo.	DescriptiveStatisticsText.do	105
3	1.3 million individual French military fatalities.	DescriptiveStatisticsText.do	67
4	11.1% lower vote shares for the left in 1919 for municipalities at Verdun under Pétain.	see table results (TableA12.do)	
4	7.7% higher vote for the Right.	see table results (TableA12.do)	
4	2.6% higher vote for the FRA.	see table results (TableA12.do)	
4	23431 colaborators for which we have information on age and sex.	DescriptiveStatisticsText.do	14
4	6% and 2.9% more collaborators for municipalities that served under Pétain at Verdun or before.	see table results (TableVI&Stats.do)	
5	Increase of 7.1% in collaboration beyond the network.	see table results (TableVI&Stats.do)	
6	5.5% more collaborators at Verdun under Pétain municipalities.	see table results (TableVII.do)	
9	By May 1st, 53% of the entire French line infantry had done a tour through the Verdun sector.	DescriptiveStatisticsText.do	27
9	Absence of structural break in time series of daily fatalities after Pétain's removal (0.26).	Figure1&Stats.do	96-97
9	Footnote 17.	FigureA2&Stats.do	43-47
10	Average share of regiments exposed to German bombardment between Feb and May (36.33% and 32%, p-value	FigureA3.do	372-373
10	Average exposure to German let offensives also unchanged (40.86% between Feb and May 1 and 38.18% from	FigureA3.do	372-373
10	Footnote 18.	Figure1&Stats.do	100-101
13	92.76% of 1914 France's municipalities sent troops that served in one of the 153 line regiments that were rotated through the Battle of Verdun. 56.86% of all French municipalities did so in one of the 92 regiments rotated through under Pétain's direct command.	DescriptiveStatisticsText.do	49/51
13	An average population of 1146 inhabitants in 1936.	DescriptiveStatisticsText.do	60
13	34942 municipalities are populated in 1936.	DescriptiveStatisticsText.do	61
15	126 bureaus recruiting from 27929 municipalities (single regiment).	!2_GenerateData.do	99
15	Percentage of municipalities (7.24%) that raised regiments that were not rotated at Verdun.	DescriptiveStatisticsText.do	48
18	Number of soldiers with municipality birth information (1270942).	DescriptiveStatisticsText.do	67
19	Footnote 41.	TableIII.do	58/66
23	86949 geo-referenced collaborators, including 85389 individuals within France's 1914 border.	DescriptiveStatisticsText.do	12
23	Footnote 58.	DescriptiveStatisticsText.do	139
24	Raised 7-9% more collaborators per capita in WWII.	See table results (TableIV.do)	
24	There were 9.91 active collaborators per 10000 people in municipalities home to a regiment that served under Pétain's command, against 7.81 in municipalities whose home regiment served at Verdun, but not under Pétain, a 26.89% difference (p-value of difference in means < 0.01).	DescriptiveStatisticsText.do	74-82
25	Share of collaborators is 7.3 percent higher in municipalities whose regiments had fought at Verdun under direct command of Pétain.	see table results (TableIV&Stats.do)	
25	Pétain at Verdun increased active collaboration rates by 6.7%, comparing otherwise similar municipalities within the same department, and by 9.1%, comparing otherwise similar municipalities within the same department that were also rotated at Verdun.	see table results (TableIV&Stats.do)	
26	Footnote 59.	DescriptiveStatisticsText.do	101
26	The German intelligence service (9146 altogether) or the LVF (8773 individuals).	DescriptiveStatisticsText.do	108/111
26	Raise of R-squared by 0.37.	see table results (TableIV&Stats.do)	
26	The related p-values, displayed at the bottom of Columns 1 to 4 of Table IV, are between 0.22 and 0.99.	see table results (TableIV&Stats.do)	124-426

27	The resulting estimation sample drops to 41.52% of the original estimation sample.	TableA9.do	41-43
27	The First-Stage F-statistic is between 50.74 and 54.41.	see table results (TableA9.do)	
27	10.2 to 10.8% more collaborators in municipalities that raised regiments that were rotated at Verdun under Pétain.	see table results (TableA9.do)	
28	Figure A7 shows that the results are not sensitive to particular regions being dropped out of the estimation sample. Results are similarly insensitive to individual departments being dropped out of the sample one by one, with the main coefficient of interest having a mean of 0.067, standard deviation of 0.0027, min of 0.056 (p-value 0.004) when excluding Orne and a max of 0.076 (p-value 0.000) when excluding Vienne.	see Figure results (FigureA7&Stats.do)	
28	This dataset lists 1327 people, who were top personnel of the Vichy government (cabinet members and top Ministry personnel), and members of the diplomatic service, press, radio and executive committees of political parties. Second, we use newly and independently collected data on 10636 volunteers seeking to join the LVF to fight alongside the German Wehrmacht.	DescriptiveStatisticsText.do	161-163
28	In Columns 3 and 4, we consider collaborators from all three sources combined (removing roughly 13% of individuals in the LVF list who already appear in our data).	DescriptiveStatisticsText.do	167
28	Footnote 64.	TableA10.do	26
29	Overall, they were 18.2% (s.e.: 0.074) more likely to vote for the right and 1.3% (s.e.: 0.007) more likely to the extreme right.	see table results (TableA11.do)	
29	Verdun-under-Pétain municipalities were 11.1% (s.e.: 0.063) and 9.5% (0.048) significantly less likely to vote for the left and the extreme left and 12.5% (s.e.: 0.056) to 7.9% (s.e.: 0.043).	see table results (TableA12.do)	
29	In the 1932 elections, these patterns are confirmed, with a large 14.9% (s.e.: 0.070) and 18.6% (s.e.: 0.048).	see table results (TableA12.do)	
30	Verdun-under-Pétain municipalities are associated with a significant 2.6% (se: 0.008) increase in the vote share for the Francist candidates in 1936. Further we also observe a 7.7% (se: 0.034) increase in the votes for more mainstream conservative right-wing candidates: the "agrarians" (AGR), at the expense of other parties representing the left and the center.	see table results (TableA12.do)	
30	The vote share for the Socialist party decreased by 7.1 percentage points (s.e.: 2.7) while the vote share for the rightwing conservative party, the Alliance Démocratique increased by roughly the same proportion (7.52 percentage points, s.e.: 3.30).	see table results (TableV.do)	
32	Regiments rotated at Verdun under Pétain mention him 29.2% more often than regiments.	see table results (TableA13.do)	
32	Footnote 72.	DescriptiveStatisticsText.do	151-157
33	On average, a municipality that is home to a line infantry regiment was awarded 36 citations (s.d. 11, min: 6, max: 69). However, those with line regiments serving under Pétain at Verdun benefited from a 14.8% increase in individual citations for valor relative to others serving at Verdun after Pétain's promotion and 23.8% relative to those assigned elsewhere (Table A13, Columns 7-8).	TableA13.do	68
33	Pétain was an infantry colonel who had held staff or field command positions in eight different regiments (or 3% of the line infantry).	TableVI&Stats.do	23 - 27
33	31 infantry divisions – or 36% of the line infantry – were to be rotated.	TableVI&Stats.do	23 - 27
33	Footnote 75.	TableVI&Stats.do	23 - 27
33	We group these together and construct a variable that captures exposure to Pétain's command before Verdun ("Pétain before Verdun": mean: 0.38, s.d.: 0.46).	TableVI&Stats.do	24
33	We exploit France's universal conscription of all men of line infantry age (21 to 23 years old) in WWI along with information on age and gender that is available for 23431 individuals in our sample.	DescriptiveStatisticsText.do	14
33	We focus on the 2677 male collaborators who were thus likely line infantry veterans in WWI.	DescriptiveStatisticsText.do	17
33	Table VI, Column 1, shows that there were 6% more likely veterans who were collaborators in Verdun-under-Pétain municipalities (s.e.: 0.016).	see table results (TableVI&Stats.do)	
33	As Table VI (Column 4) reveals, Verdun-under-Pétain municipalities have 7.1% more non-line infantry collaborators (s.e. 0.017).	see table results (TableVI&Stats.do)	
33	In contrast, municipalities whose troops served under Pétain before Verdun add close to zero collaborators among non-line veterans (a 0.6% increase, s.e. 0.019, Column 5). This pattern is accentuated once we control for the fact that some of units exposed to Pétain earlier on subsequently rotated through Verdun under Pétain as well: in contrast to the 7.2% (s.e. 0.018) increase in non-line veteran collaborators among municipalities exposed to Pétain's network forged at Verdun, the effect exposed to Pétain's pre-Verdun network is, if anything, slightly negative (-0.3%, s.e. 0.017, Column 6).	see table results (TableVI&Stats.do)	
35	Table A7 confirms that the effect on collaboration increases (somewhat) in magnitude (to 8-10%) in municipalities with majorities of regiments assigned to Verdun-under-Pétain and when we exclude municipalities that had any partial or half exposure to non-Verdun-under-Pétain regimental rotations (Columns 3-6).	see table results (TableA7.do)	
36	Yet, as Table VII, Columns 1-4 suggest, all the parties that had their genesis in the inter-war period, including the PPF, the reconstituted Cagoule (MSR) and the Francist movements reveal significantly higher membership (of 6.2%, 5.2% and 5.5% more respectively) in Verdun-under-Pétain municipalities after their re-emergence under Vichy.	see table results (TableVII.do)	
36	Footnote 81.	see table results (TableVII.do)	
38	As the Table reveals, Verdun-under-Pétain municipalities showed increase collaboration by a consistent 4-6% for all these different forms of paramilitary groups.	see table results (TableVII.do)	
38	Footnote 82.	DescriptiveStatisticsText.do	162
38	Footnote 84.	DescriptiveStatisticsText.do	173-175
XVII, Appendix	We focus on the sub-sample of movers (i.e. those whose birth municipality is different from their residence in 1944-45, N=13235).	DescriptiveStatisticsText.do	138
XVII, Appendix	The coefficient associated with Verdun-under-Pétain is larger in Column 1 than in Column 3, and this difference is statistically significant at the 4.43% level.	TableA16&Stats.do	43
XVII, Appendix	Footnote 89.	DescriptiveStatisticsText.do	138
XVII, Appendix	Footnote 91.	TableA16&Stats.do	55
XVIII, Appendix	Overall, we have data on both rounds for all 24813 municipalities in France in which a second round was held and for which these data still exist, including 23795 municipalities within France's 1914 borders.	DescriptiveStatisticsText.do	185-190
XVIII, Appendix	We thus restrict our analysis to four major parties which ran for second rounds in a meaningful number of municipalities (ordered from left to right): the SFIO (socialist party, 17% of the vote in the first round, see Table B5), the Radicaux Socialistes (RAD-SOC, centre left, 19% of the vote in the first round), Alliance Démocratique (AD, 27% of the vote in the first round) and the Parti Républicain National (PRN, 16% of the vote in the first round). We provide more information on each of these party and summary statistics in Section B.B5 of the Appendix).	see table results (TableB1-B6.do)	
II, Online Appendix	Individual members of Bucard's Francisme organization would be recorded by French army intelligence in our 1944 dataset, with the correlation between the local share of votes for the 1936 party and the local density of collaborators affiliated with the recomposed movement during the Second World War is reassuringly high: 0.89.	DescriptiveStatisticsText.do	145
